## Surrey & York Flange Range

Considered an industry standard, the Surrey & York Flange range has dominated the market place for over 10 years. The Surrey & York Flange range is designed to provide an independent hot water supply, dramatically reducing air surging, noise and temperature variations. Connections are made directly in to the hot water supply tank. With a built in air vent, the Surrey & York Flange automatically purges the shower circuit, preventing air accumulation in the hot water feed (patent applied for). After trapping the air, the vent releases it from the hot water supply, preventing back feed of aerated hot water. The installation of a Surrey or York Flange ensures a 'Splutter-Free' showering experience.

### Range

- 15mm Surrey Flange: To suit cylinder outlet of 1" BSP female. Suited to pumps up to 1.5 bar pressure.
- 22mm Surrey Flange: To suit cylinder outlet of 1" BSP female. Suited to pumps up to 3 bar pressure.
- 22mm York Flange: The York Flange is a modified version of the 22mm Surrey Flange, with an adaptor to suit cylinder outlet of 1" BSP male. Suited to pumps up to 3 bar pressure.
