Parts / Diagrams

Wall bracket

Wall plug

Wall screw

Waste

Tools required

Spirit Level

Electric drill

Drill bit
($\Phi 8$)

Tape measure
(3m~5m)

Silicone

Pencil

Screwdriver

Cabinet installation:

The room in which the unit is being installed, must be well ventilated.

Please check for pipes and cables prior to drilling, after the position of the brackets is marked, drill the holes in the wall, using an 8mm drill bit(not supplied), to a depth of approx 50mm.

Insert the wall plugs and tap flush with the wall surface and secure the wall brackets into place.

Check the brackets fitted to the unit are fully tightened.

Wall Hung Unit Installation:

Units must be secured to the wall

Basin and Waste installation:

Please note for a basin installation, the tap hole has been drilled. Before installing the basin, confirm your selected basin will fit the cabinet. If you need to match a tap, please use a tap according to drilled tap hole and the drilled edge must be sealed.

After the basin hole and tap hole are confirmed, the basin can be fitted to the unit, by applying a bead of silicone between the unit and basin to provide a seal and fixing for basin to the unit.

Also run a bead of silicone along the back edge of the base where it meets the wall.

After silicone has been applied, this must be left for 24 hours to dry.

Silicone can be used to seal the waste

Troubleshooting:

DRAWER REMOVAL & INSTALLATION

Maintenance and Cleaning

Wipe the product clean and dry regularly, especially when the product is subject to steam or splashes.

Do not use harsh chemicals or materials on the product, as this will damage the product and invalidate your guarantee.

To clean and maintain the product, wipe using a clean damp cloth and wipe dry with a soft cloth.
